

TRANSIENT RESPONSE CHARACTERISTICS

See Fig. 5.17.

Rocard Model of Vehicle with Rigid Frame

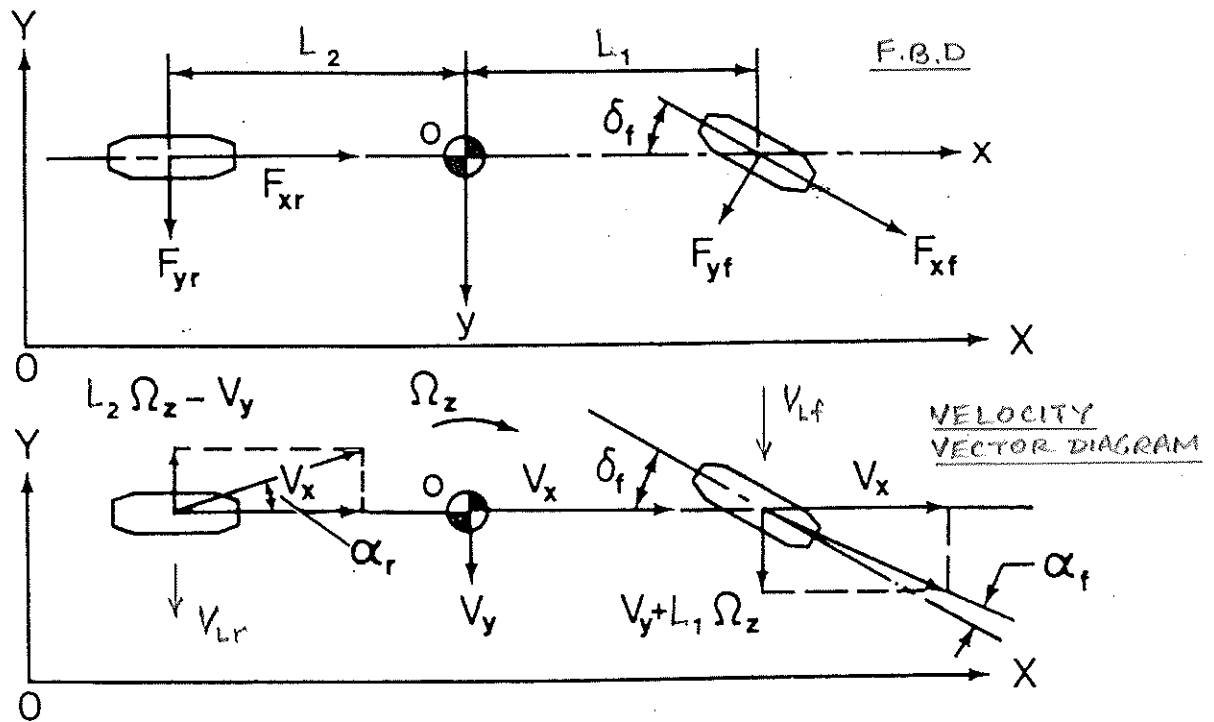

Fig. 5.17 Simplified vehicle model for analysis of transient motions.

Define:

X, Y = axes of fixed frame of reference

x = longitudinal axis of vehicle

y = perpendicular axis of vehicle

G = center of mass of vehicle

V_x = x -component of velocity of G parallel to x -axis

V_y = y -component of velocity of G perpendicular to x -axis
